

ROLLTRAILERS & GOOSENECKS

The SEACOM rolltrailer programme is available in a wide variety of configurations and capacities with detachable or fixed goosenecks.

All designs are planned and executed to endure the toughest working conditions in complete safety.

The specification of each trailer is reached in close consultation with the customer, such variables as capacity, cargo type, gradients, deck loadings, terminal surfaces and distances all contributing to the final choice of axle types, tyre size, type and composition, frame construction, decking material, cargo and gooseneck securing options.

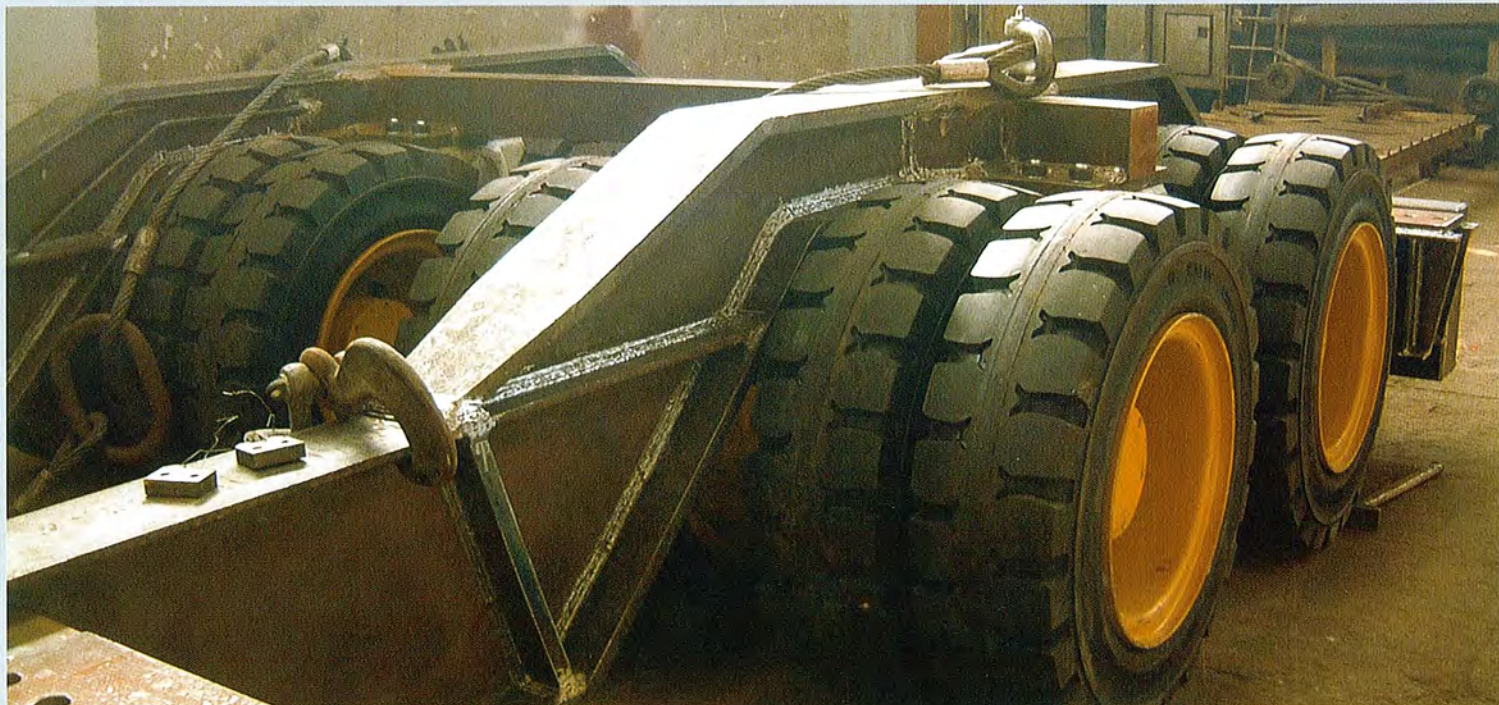

INDUSTRIAL TRAILERS

SEACOM has a comprehensive range of drawbar trailers and rolltrailers for a variety of industrial applications, all of which can be adapted to suit particular customer requirements.

The company possesses abundant technical expertise enabling it to design and deliver innovative technical solutions to satisfy demanding handling problems in heavy and continuous process industries.

PORT CHASSIS AND DRAWBAR TRAILER SYSTEMS

From a simple, rugged single axle chassis to fully tracking trailer trains, SEACOM offer a complete range of portside equipment, designed to complement all operating and budgetary objectives.

Chassis are designed to resist repetitive loads and can be provided with single or tandem-axles. Suspension, braking and lighting systems together with differing tyre types are simply a few of the options available.

The drawbar trailer programme introduces a choice of steering systems to enable best use of terminal space as well as mirroring the tracking of the prime mover.

CASSETTES

Complying with internationally adopted standards and in a capacity ranging up to 140 tons, cassettes manufactured from high tensile steel are custom designed for the efficient transport of paper, containers, forest products, general cargo, steel coils and slabs.

SEACOM provides the benefits of more than 40 years expertise in the skilful development of cost effective cargo handling systems.

The result, an extensive range of equipment possibilities covering all the requirements of containerised and general cargo, designed and produced to exacting standards, proven and accepted in ports and terminals worldwide.

These activities are supported by offices in Switzerland, Germany, the United Kingdom, France and Poland and supplemented by an international agency network.
